Advanced COM Port Redirector is a multi-functional utility designed to redirect any COM port data to any virtual (including RTS, CTS, DSR, DTR and Ring signal lines duplication), created port. By using this software, we can control the way all data stream coming from original serial port is redirected to any virtual port. With this software you can easily redirect COM1, COM2 or COM3 port data to another virtual COM port created by Advanced COM Port Redirector. All redirection is performed using virtual ports created by your program. Advanced COM Port Redirector gives you the ability to create virtual copy of any COM1/COM2/COM3 port, associated with an application. You may have more than one, physical and virtual COM port connected to the same application (e.g. in a conventional way to Programmable Logic Controller (PLC) console port when not connected to any PLC input port). Thus you can easily control how all data stream coming from original COM1/COM2/COM3 port will be redirected to any virtual COM port you may use later. Advanced COM Port Redirector is a powerful tool to perform an unlimited data stream redirection. Supported Windows OS versions are:  Windows 2000  Windows XP  Windows 2003  Windows 7  Windows 8  Windows 10

Advanced COM Port Redirector Description: Advanced COM Port Redirector is a software that enables automatic COM port redirection functionality under almost all modern Windows OS versions. The latter gives you the ability to redirect any COM port data (both physical and virtual) to any other COM port created by your program. Advanced COM Port Redirector enables you to setup one to one and one to multiple COM port redirection. Advanced COM Port Redirector allows you to use parallel ports in the same computer. You may have more than one COM port from a particular device connected to the same COM port in parallel. This could be an issue if you need to connect to a different port to get data in parallel to the same device. Advanced COM Port Redirector enables you to redirect port connection to selected COM port created by your program in parallel. This would be very helpful if for example you would like to connect 2 or more serial devices to the same COM port. Advanced COM Port Redirector enables you to control the way all data stream coming from original COM port would be redirected to any COM port created
